CryptoAdSolution Lightpaper
makes crypto advertising great again

WHAT IS CRYPTOADSOLUTION?

CryptoAdSolution is a community and industry-focused cryptocurrency developed in response to the difficulties of market services and master node cryptocurrencies. We create a platform in conjunction with a hybrid system and cryptocurrency specializing in marketing services in the cryptographic industry. CryptoAdSolution is a versatile ecosystem. The developers have set themselves the task of delivering a solution-oriented concept with a cryptocurrency, which should be the answer to the problem of simple marketing of the crypto industry.

CryptoAdSolution has set itself the task of bringing back the advertising for the crypto industry. For the industry and the crypto community, however, a solution is necessary. In this area of cryptographic currencies and blockchain technology, too, it is necessary to have sufficient marketing possibilities.

HOW CAN CRYPTOADSOLUTION HELP ME?

With a variety of features and products, this currency and its associated system makes the benefits of marketing, advertising, and traffic frequency an advantage.

A great deal of attention is paid to the advertising packages, which are responsible for the generation of qualitative traffic in the form of clicks and reward the customer with a passive income. The so-called Costumer Advertising Packages provieds Costumers with Advertising services. The third milestone is the Advertising Marketplace, which brings together advertisers and consumers. Last but not least the CryptoAPP Solution and the CryptoAdSolution AdExchange.

Launching Advertising Marketplace

Read more in our White Paper

PRODUCT 1:   ADVERTISING PACKAGE

Advertising packages basically have two functions. The customer can buy them with CADS to generate traffic to a desired product and get high quality clicks, and they also generate a passive income through our sophisticated advertising cost reimbursement system. The customer participates in the advertising cycle every 24 hours and consumes at least 70 seconds of advertising every day. The Advertising Package, which is purchased for $ 50 in CADS, then generates a 20% profit. The so-called Advertising Share and the commissions are distributed daily in CADS.

PRODUCT 2:   COSTUMERS ADVERTISING PACKAGE

With this product, we provide our customer with an advertising package tailored to him, his wishes and his budget. The customer can request this through a questionnaire, in which the most important wishes are clarified. This product is also being paid to CAS in CADS, and is made for successful, larger-scale marketing. Here, the access to internal platform advertising in the form of banners and email lists but also external assistance such as PPC, SEO and video creation and much more offered.

PRODUCT 3:   ADVERTISING MARKETPLACE

The marketplace acts like a search engine that brings together advertisers and advertisers through an algorithm and settles a commission in CADS. We have made it our goal to be able to disguise each crypto-based project with advertising and with each other.

PRODUCT 4:   CRYPTOAPPSOLUTION

The CryptoAPPSolution offers a mobile solution and thus a mobile version of CADS. Apps like Blockfolio etc. can be supplied with advertising, traffic and customers. It will be a separate advertising system, which is similar to the Advertising Packages introduced. This is planned for the year 2019

PRODUCT 5:   CRYPTOADSOLUTION ADEXCHANGE 2020

CryptoAdSolution AdExchange is a decentralized ad exchange built on Stratis blockchain and smart contracts. The CryptoAdSolution AdExchange is designed to disrupt and replace the traditional digital advertising models by providing a transparent, focused solution for advertisers to collaborate with ad publishers and reach the best potential clients.

WHY WE USE STRATIS BLOCKCHAIN, SMART CONTRACTS AND C# ?

A smart contract is a computer protocol intended to digitally facilitate, verify, or enforce the negotiation or performance of a contract. Smart contracts allow the performance of credible transactions without third parties. So that means that smart contracts are snippets of code that extend the functionality of a blockchain, allowing it to map out complex financial interactions through the sending of funds and storage of data. Stratis Smart Contracts in C# builds upon an established and popularized framework, language and ecosystem. Therefore, it is more readily poised for wider adoption as a smart contract standard. Due to easy accessibility and the great implementation possibilities, we have chosen our products as our basis and mainly for the AdExchange C# and Stratis.

WHAT ARE MASTERNODES?

Masternodes are, essentially, a decentralized web of computers that serve our network. Masternodes perform important network functions and receive part of the block rewards. They serve the CryptoAdSolution ecosystem by stabilizing coin supply, processing transactions, and securing the network.

In a nutshell, this is a simple, lucrative and well-known way to get rid of the crypto-fermentation network. A master node is thus a unit of coins defined by a certain number of CADS. The masternode owns, therefore keeps his coins on a so-called cold wallet, which is provided by us, secures these there.
